# 111．DOLICHOS Linnaeus，Sp．Pl．2：725．1753，nom．cons． 

## 镰扁豆属 lian bian dou shu

Wu Delin（吴德邻 Wu Te－lin）；Mats Thulin

Herbs or shrubs，erect，climbing or prostrate，sometimes with carrotlike woody rhizomes．Leaves pinnately 3 －foliolate，sub－ digitate，or 1－foliolate；stipules basifixed；stipels present．Racemes axillary or terminal，sometimes subumbellate，or flowers solitary， axillary．Calyx 5 －toothed， 2 －lipped，upper lip entire or bifid，lower lip 3－toothed．Corolla white or purple；petals clawed；standard suborbicular，often with inflexed auricles and appendages at base；wings obovate or oblong，$\pm$ adherent to keel；keel incurved，often beaked but not twisted．Vexillary stamen free，remainder connate into an open sheath；anthers uniform．Ovary $3-12$－ovuled；disk present；style swollen and $\pm$ twisted toward base or narrowed from base to tip，glabrous or shortly pubescent all over，or with a ring of hairs around terminal capitate stigma．Legumes straight or arcuate，flattened，not septate．Seeds $\pm$ flattened，arillate or strophiolate； hilum short，usually central．

About 60 species：distributed in Africa and Asia；four species in China．
1a．Leaves glabrous or almost so on both surfaces
1．D．trilobus
1b．Leaves hairy on both surfaces or abaxially．
2a．Standard up to 1.2 cm 2．D．tenuicaulis
2b．Standard 1.5 cm or more．
3a．Leaflets ovate－rhombic，6－7 $\times 4-6 \mathrm{~cm}$ ，apex acuminate and apiculate；corolla white with purple striae ．．．．．．．．3．D．thorelii
3b．Leaflets broadly rhombic－ovate or ovate， $10-11 \times 9-9.5 \mathrm{~cm}$ ，apex acute or slightly obtuse；corolla purple

4．D．junghuhnianus

1．Dolichos trilobus Linnaeus，Sp．Pl．2：726． 1753.
镰扁豆 lian bian dou
Dolichos falcatus Klein ex Willdenow；D．kosyunensis Hosokawa；D．trilobus var．kosyunensis（Hosokawa）H．Ohashi \＆Tateishi．

Twining herbs．Stems slender，glabrous or subglabrous． Leaves pinnately 3 －foliolate；stipules ovate，ca． 3 mm ，veins conspicuous；petiole 2－3 cm；stipels linear；leaflets rhombic or ovate－rhombic，2－6 $\times 2-4.5 \mathrm{~cm}$ ，glabrous or almost so on both surfaces，base broad and obtuse，apex acute or acuminate．Ra－ cemes axillary，slender，1－4－flowered；peduncles equal to or longer than petiole．Bracts and bracteoles with conspicuous veins．Calyx broadly campanulate，ca． 3 mm ，glabrous；teeth triangular．Corolla white， $10-20 \mathrm{~mm}$ ；standard orbicular，base with 2 triangular appendages，without auricles；wings obovate， slightly longer than standard；keel base truncate，clawed．Ovary sessile．Legumes linear－oblong，ca． $6 \times 0.8 \mathrm{~cm}$ ，slightly curved， compressed．Seeds 6 or 7．Fl．Oct－Mar．

Thickets．Hainan，Taiwan［tropical Africa and Asia］．
2．Dolichos tenuicaulis（Baker）Craib，Contr．Fl．Siam，Dicot． 66． 1912.
丽江镰扁豆 li jiang lian bian dou
Phaseolus tenuicaulis Baker in J．D．Hooker，Fl．Brit． India 2：201．1876；Dolichos appendiculatus Handel－Mazzetti．

Twining herbs．Stems slender，over 1 m ，sparsely pubes－ cent with yellowish hairs．Leaves pinnately 3 －foliolate；stipules ovate－lanceolate，ca． 6 mm ，ciliate， 7 －veined；stipels lanceolate， ca． 2 mm ，densely hirsute；leaflets broadly rhombic－ovate， $2.5-$ $4.8 \times 2.5-4.5 \mathrm{~cm}$ ，lateral ones more narrow，oblique，white stri－ gose on both surfaces，especially on veins abaxially， 3 －veined， base broadly cuneate，apex acute．Racemes axillary；peduncles
equal in length to petiole；rachis $\pm$ densely hirsute with short curved hairs．Pedicels $2.5-4 \mathrm{~mm}$ ；bracts and bracteoles lanceo－ late， $1.5-2 \mathrm{~mm}$ ．Calyx tube obliquely cup－shaped， $1-1.5 \mathrm{~mm}$ ， puberulent or subglabrous；teeth broadly triangular，upper 2 connate for ca． $2 / 3$ of length．Corolla violet，ca． 1.2 cm ；stan－ dard suborbicular，slightly emarginate，base attenuate into a claw，with appendages and auricles；wings oblong－obovate，as long as standard，clawed and with auricles；keel ca． 8 mm ， slightly curved，margin rough．Ovary stipitate，sparsely hairy； style glabrous；stigma brush－shaped．Legumes linear－oblong，6－ $8 \times$ ca． 0.8 cm ，slightly curved，compressed．Seeds 6－8．Fl．Aug．

In grass；2000－2300 m．Yunnan［Bhutan，India，Laos，Myanmar， Nepal，Thailand］．

3．Dolichos thorelii Gagnepain，Notul．Syst．（Paris）3： 191. 1915.

## 海南镰扁豆 hai nan lian bian dou

Twining herbs．Stems angular，pubescent．Leaves pin－ nately 3 －foliolate；stipules ovate－lanceolate，striate；stipels line－ ar，3－5 mm；leaflets ovate－rhombic，6－7 $\times 4-6 \mathrm{~cm}$ ，appressed pubescent on both surfaces， 3 －veined from base，base rounded or broadly cuneate，apex acuminate and apiculate．Racemes axillary， $7-14 \mathrm{~cm}$ ，densely pubescent，with flowers in upper 2－3 cm ；peduncles $5-11 \mathrm{~cm}$ ．Bracts ovate，striate，caducous；bracte－ oles ovate，ca． 5 mm ．Calyx ca． 5 mm ；teeth very short，upper 2 nearly wholly connate．Corolla white with purple striae，16－18 mm ；standard below middle with 2 appendages；wings obovate－ oblong，with round auricles at top of claw；keel falcate，apex obtuse．Ovary linear，slightly pubescent；style glabrous；stigma brush－shaped．Legumes linear，ca． $6 \times 0.7 \mathrm{~cm}$ ，compressed，pu－ bescent．Seeds 7．Fl．Dec．

Thickets，open forests．Hainan［Laos，Vietnam］．
4．Dolichos junghuhnianus Bentham in Miquel，Pl．Jungh． 240． 1852.

## 滇南镰扁豆 dian nan lian bian dou

## Dolichos henryi Harms．

Twining herbs．Stems densely pilose or subglabrous． Leaves pinnately 3 －foliolate；stipules broadly lanceolate；stipels linear－lanceolate；leaflets broadly rhombic－ovate or ovate， $10-$ $11 \times 9-9.5 \mathrm{~cm}$ ，sparsely pilose，base rounded or obtuse to broadly cuneate，apex acute or slightly obtuse or with very short acumen．Racemes pubescent，with flowers paired at swollen nodes of axis；peduncles $4-7 \mathrm{~cm}$ ．Bracteoles 7－8 mm．Calyx 7－ 8 mm ；teeth short，upper 2 nearly wholly connate．Corolla pur－ ple，glabrous；standard suborbicular，ca． 15 mm ，below middle with 2 callosities，base with inflexed auricles，claw curved； wings obliquely oblong， $16-17 \mathrm{~mm}$ ；keel dorsally curved，apex obtuse．Ovary linear，shortly stipitate，very shortly tomentose； style glabrous，thickened；stigma brush－shaped．Legumes to－ mentose when young，glabrescent when mature．

S Yunnan［Indonesia，Thailand］．
