IN first introducing to the public the "Unicode," by means of "The Universal Telegraphic Phrase-Book," * it is well to give a few preliminary explanations and directions.

All the great submarine Telegraph Companies, and almost all foreign countries and colonies, have adopted the word-tariff, or system of charging a certain sum for each word, and Great Britain has practically done the same. Every person who has heretofore sent telegraphic messages abroad has learned by experience the economy of condensation, and the advantage of the use of a Code known to both sender and receiver. By this means the substance of a message embracing a dozen ordinary words may be conveyed in a single code-word, with a fulness and clearness not to be otherwise attained unless at a prohibitive cost. The same effect is discovered in inland telegraphic communication under the new arrangements. The sixpenny telegram is found, except under special circumstances, to be a misnomer, the unavoidable length of the addresses (where the expense of registering a cypher has not been incurred by the Receiver), and the name of the Sender and Receiver absorbing so many of the twelve words as frequently to leave only two or three available for the text of the telegram. Attention is therefore naturally turned to condensation, and, as a necessary consequence, to coding.

The Code-Book hitherto has been distinguished by two features—a high price and an attempted exclusiveness. The "Unicode" aims at precisely opposite qualities, viz., a low price and a universality of employment, so that not only in all offices, but in clubs, hotels, and private residences copies shall be found and freely used.

* A Pocket Edition of this book, of convenient size, is also published, price 2s. 6d.

An example will best demonstrate the mode of using, and the economy effected. Say the following is the message in full:—

Smith,				
TO	100, Prince Rupert Road,			
	Shepherd's Bush.			
Jones	dines	with	us	this
evening	and	remains	the	night
				Smith

Here the address and signature take eight words, and the body of the message ten, making eighteen words in all, or six extra to pay for; whereas by using the "Unicode" the message is reduced to ten words, and runs thus:—

Smith,				
TO	100, Prince Rupert Road,			
	Shepherd's Bush.			
Jones	Coctivus			
		Smith		

But in foreign telegrams the difference is more striking. The rate from South America varies, but take it, *e.g.*, at five shillings per word, and the following message (without reckoning the address) would cost 30s.:— "Order executed before your telegram arrived"; whereas the "Unicode" word "*Obumbro*" would convey the same message for five shillings, or a saving of 25s.

Many phrases which at first sight would appear too unnecessarily minute, notably in domestic affairs, are purposely inserted as being those which experience shows are in actual daily use, notwithstanding their heavy cost for transmission

Users of existing codes have constantly experienced difficulty and misunderstanding from the fact that, English words being used for the cyphers, the messages have at times read intelligibly in the ordinary and not the code meaning of the words, and the Receiver has not known which to adopt. This has been entirely obviated in the "Unicode" by exclusively employing for the cyphers Latin words which strictly conform to the regulations of the International Telegraph Conferences held in various capitals. An equally important point has also carefully been borne in mind. It is generally known that the telegraphic alphabet is composed of three elements: the dot, the dash, and the space. These symbols may with great facility be transposed in transmission, causing words however dissimilar in ordinary language (such as *fancy* and *pantry*) to be confounded one with another in the process of telegraphy. This compilation, however, has been made under the personal supervision of telegraphic experts of long experience, and it is claimed for it that the cypher words are from their telegraphic construction the least liable to erroneous transmission by the operators.

The cypher words have been arranged alphabetically, and the phrases are likewise so arranged, having regard to what is in each the principal or key-word.

To allow for the composition of a small private code available only to the individual compilers, and not to be adopted hereafter in the "Unicode" for specific phrases for public use, a few pages with cypher words only have been added, to which phrases may be attached as desired.

NOTE TO SECOND EDITION

The compilers refer to the following communication which they have received :—

“I have examined from the point of view of a telegraph operator of long standing, several Codes which have been recently published, and I emphatically pronounce the UNICODE to be the only one I have seen where the hand of the expert can be discovered. In one of the other compilations it is claimed as a merit that none of the cypher words exceed five letters. This, however, is a serious blot, and condemns the book in my judgment. In two Codes I observe a free use of manufactured words, and yet, for extra-European correspondence, such words can be and are generally rejected by the Cable Companies. Naturally it is preferable that the operator should transmit messages where the meaning is clear and the words as usual, but as it seems evident that the use of Codes will grow day by day it is to be hoped that the public will continue to employ one so workman-like and systematic as the UNICODE.”

October, 1886.

Users will find it a great convenience to print on their letter paper and invoices the words “Code in use—Unicode.”

REGULATIONS AS TO TRANSMISSION OF TELEGRAMS.

THE rules and regulations which govern the telegraphic communication between various portions of the world are laid down by the International Telegraph Conferences which meet periodically in one or other of the capitals of Europe, and the following gives the effect of those which should be most widely known :—

All telegrams should be legibly written.

Telegrams may be composed of plain language, of code language, or of secret language.

Telegrams in plain language must present a clear meaning in any one of the languages admitted for telegraphic correspondence.

Telegrams in code language must consist of real words belonging to one of the following languages, namely, English, French, German, Italian, Dutch, Spanish, Portuguese, and Latin, or of combinations of letters pronounceable according to the current usage of one of those languages. No word or combination of letters may contain more than ten letters.

The Company can demand the production of the codes and vocabularies, for the purpose of controlling the execution of the preceding regulations.

Illegitimate combinations of words contrary to the usage of the language, and abbreviated and wrongly spelt words, are inadmissible.

In telegrams the text of which is written entirely in plain language, the maximum length of a word is fixed at 15 letters, any additional letters being counted and charged for as extra words, at the rate of 15 letters to the word.

Any instruction the sender may have to give as to the delivery at destination, prepayment of reply, acknowledgment of receipt, to its being a collated telegram, &c., should be written immediately before the address. These indications may be given in the following abbreviated forms, when they will be counted as one word only :—

RP for Reply paid.	FS for To follow.
TC ,, Collation paid.	RPD ,, Urgent reply paid.
PC ,, Acknowledgment of receipt.	PR ,, Post registered.
XP ,, Express paid.	

Any sender may request, by writing the instruction “Télégramme à faire suivre” (*i.e.* to follow) or “(FS)” (which is charged for), immediately before the address, that the terminal office shall cause his telegram to follow the receiver within the limits of Europe.

The charge to the first address only is prepaid, the cost of further transmission being collected on delivery.

EDITOR'S NOTE

AT the instance of the Bureau International des Administrations Télégraphiques, several alterations in the Code-words of UNICODE have been made. "Commorit" (p. 27) now appears as "Commoret"; "Cynomyla" (p. 32) as "Cynomyia"; "Ilicitum" (p. 45) as "Ilicitum"; "Melitites" (p. 54) as "Militites," which is out of its alphabetical order; "Mollesca" (p. 57) as "Mollusco"; "Myrapium" (p. 58) as "Myrapiam"; "Myscus" (p. 59) as "Mysus"; "Nuberum" (p. 63) as "Nuberem"; "Reice" (p. 83) as "Reices." "Melofoliam" (p. 55), which stood for "Forward my letters until further instructions to Poste Restante here," "Siquandare" (p. 96), which signified "Wrote to you by this evening's post," and "Siquando" (p. 96), "Wrote to you by this morning's post," have been omitted.

PRIVATE CODE.

A SIMPLE means of converting the Unicode into a secret private code is for correspondents to arrange to use instead of the cypher set opposite to the phrases in the book the cypher affixed to the phrase one, two, or more lines above or below, as may be selected. For instance, if it is agreed to use instead of the regulation cypher word the one next following it in the Code, a telegram with the word "*Oporice*" would mean to the general body of Unicode users "Posted letter to-day, do not leave before receipt;" but the person for whose private information the message was intended would read the real meaning as "Posted letter to-day, do not act on it, another follows."

The following selection of cypher words will never be included in the "Unicode" for permanent use with any specific phrases. They are intended to be used only for private phrases to be arranged specially between individual correspondents:—
